Project Information

Identifier 2022-1-ES01-KA122-VET-000073173

Start Date Oct 1, 2022

End Date Nov 30, 2023

EC Contribution 61,111 EUR

Topics Creativity, arts and culture ; Employability ; Career guidance

Project Summary

Background

The main interest is to offer a month or three-months stay in Italy to our students of Cooking and Gastronomy to do a internship in a company.

We look for an improvement of their professional, personal and languages skills (and it may even be two: English and Italian) thanks to the autonomy that they will have to develop when living outside their home for a considerable time such as one or three months.

The students of Cooking and Gastronomy will see their employability increased and above all, they are expected to see a remarkable personal growth that will help them in their life after graduation. Regarding the staff of the center: this project will nurture the European and international values to all the staff since they will have contact with the students who want to be participants in the project or with the management of mobilities.

Objectives

It is expected to guarantee the employability and personal growth of ECOTUR students through educational plans in our school supported by international activities where we want the Erasmus + program to be a cornerstone. What will help us to achieve this main goal is to involve all students and staff in the internationalization program in which students become participants in an Erasmus + project that increases their level of professionalism and transversal skills and ultimately instance to be an example for the staff and future students at the center. On the other hand, we want ECOTUR to be considered as a center that is committed to an internationalization strategy, especially within the European context. In this way we will be more attractive to the potential public of the school and we will be better considered at national and European level.

Activities

This Erasmus + project has a main activity divided into two different durations of mobility, these are 8 ErasmusPro places for mobility of 3 months and 8 short mobility of VET students for students traveling for 1 month.

8 Erasmus + short-term places are requested because it is the number of participants that each year we have been able to move within the consortium projects; On the other hand, 8 ErasmusPRO places are requested with a duration of 3 months considering that it is the type of mobility in which the most deepening and greater advances are achieved both professionally and personally for each participant but at the same time and as We said before, we know that not all participants are prepared for their first time away from home to be for such a long duration in a foreign country.

Impact

The main result of the project is that the students acquire work, professional (professional, technical and linguistic skills) and personal experience at an international level that allows them to have a broader vision of companies and their clients in a totally globalized business world. Internships in companies abroad will allow them to add a competitive advantage to their curriculum vitae when it comes to accessing the labor and professional world in our country.

In addition, for the school we hope to achieve being an international school and well valued inside and outside our borders.
